

## **Sentact Acquires Performance Health Partners and Vizient Patient Safety Organization to Drive Patient Safety At-Scale**

*Acquisitions strengthen Sentact's safety solutions with industry-leading incident reporting technology and one of the nation's largest patient safety organizations*

**Nashville, Tenn.**, December 15, 2025 — [Sentact](#), a leader in healthcare technology, analytics, and services reimagining the path to exceptional care, today announced it has acquired [Performance Health Partners \(PHP\)](#), the #1 Best-in-KLAS provider of safety event / incident management software, along with the Vizient® Patient Safety Organization (PSO), one of nation's largest and longest running PSOs. Together, these acquisitions broaden Sentact's patient safety portfolio and represent two critical pieces in Sentact's growing strategy to empower healthcare organizations to drive measurable improvements in safety and quality – and to deliver highly reliable, consistently excellent care.

PHP's flagship event / incident management solution is a configurable, flexible system that streamlines safety incident reporting, from initial report to resolution. Ranked #1 [by KLAS](#) for Healthcare Safety, Risk, and Compliance Management Software for the last three consecutive years, PHP's technology further enhances Sentact's software capabilities, providing digital workflow and insights that support root cause analysis and drive safety improvements for healthcare organizations of all types.

As part of the acquisition, PHP Founder & CEO Heidi Raines will join Sentact as Chief Strategy Officer to support the combined organization's mission to power the critical safety, quality and patient experience initiatives that improve patient outcomes.

"PHP's mission has always been to transform healthcare safety, and joining Sentact accelerates that mission in a powerful way," said Heidi Raines, Chief Strategy Officer at Sentact. "Joining Sentact enables us to significantly expand our reach and deliver even more value to the organizations we have proudly served for over a decade. By combining our Best-in-KLAS solution with Sentact's existing technology, analytics, and services, we're building a future where healthcare organizations can be proactive in their pursuit of safer care."

An AHRQ-listed PSO and one of the largest PSOs in the country, the Vizient PSO includes 332 participating organizations, spanning academic medical centers, health systems, ambulatory clinics, physician groups, long-term care facilities, and other care settings. With the same team of professionals joining Sentact that have led the Vizient PSO for the last 15 years, Sentact's new PSO offering equips participating organizations with safety-focused tools, analytics, insights, and expert guidance to strengthen patient safety, while creating a safe, legally protected space for sharing information and learning from other organizations to reduce risk and drive a strong safety culture.

“Patient safety and reducing preventable harm is one of the top strategic priorities, if not the top strategic priority, for hospital and health system leadership,” said Daniel Hart, CEO of Sentact. “These acquisitions are another significant step forward for our organization in reimagining the path to exceptional care. Together, we’re enabling organizations to better support safety initiatives, better anticipate risks, and focus on what matters most, achieving enhanced outcomes for patients.”
